DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

The rejection from the previous Office action over Hepp (3,461,183) in combination with Saito (5,935,529) and Tonkovich et al (2003/0072699) is unchanged (see previous Office action).

Response to Arguments

Applicant's arguments filed 8/9/05 have been fully considered but they are not persuasive.

The argument that there is not proper motivation to combine Hepp and Saito references is not persuasive since as discussed in the Office action it would amount nothing more than a use of known material for its intended use in a known environment

to accomplish entirely expected results. A support is well-known used to enforce the mechanical strength of a catalyst.

The argument that there is no suggestion that modifying the pore size of the large pore support can optimize the Hepp's dehydrogenation catalyst is not persuasive since it is well-known that the catalyst activity and the process efficiency are variable(s) that can be modified by adjusting pore size and distribution for the porous substrate.

The argument that Hepp catalyst and the Saito catalyst are catalysts used for different processes is not persuasive since the claimed invention is a catalyst not a process.

The argument that applicant has shown that, surprisingly, catalysts having the claimed features exhibit superior results for the water gas shift reaction is not persuasive since the catalyst in the claim is not the catalyst in examples. For example, in the example 2 and 3, the catalyst contains 1.5 % wt of K and 0.5 % wt Ru. **None** of catalysts in the present claims has these features. Therefore, the claimed catalyst and the catalyst in examples are totally different catalysts. Applicant is reminded that it has been established that evidence of unobviousness must be commensurate in scope with the claims. *In re Kulling* 14 USPQ 2d 1056, 1058 (Fed.
